

Shared IT Services for Higher Education & Research

Conference 2017

Re-Thinking IT Leadership - A Science Based Approach to Team Engagement

Darren Eveleigh - Infrastructure Manager
Vancouver Island University

Quick Poll

- How many senior leaders do we have?
- Middle managers?
- In the trenches?

Outcomes/Goals

- Give you a brief introduction to brain based leadership
- Challenge the "command and control" "old school" management style
- At least a couple actionable ideas that may help you achieve high engagement vs minimal compliance in the work place
- Uncomfortable

Logistics

- Digestion break(s)
- Cell Phones/Laptops
- Interactive

Sana et al. (2013)

Ophir et al. (2009)

Agenda

- The narrative - about me
- Typical challenges we face in IT
- An overview of Neuroleadership
- Introduction to the S.C.A.R.F
- Digestion(s)
- Example: Promoting Insight in the workplace

The Narrative

“People who lead with data are doomed for failure” - Soledad O’Brien

About Me

- Infrastructure Manager at VIU
- Never wanted to be a manager
- Alberta
- Comp Sci Degree - programmer
- K-12
- Lethbridge College
- City of Lethbridge
- Values that i work under
- Always questioned my approach

What is Neuroleadership?

Neuroleadership: *is a term coined in 2006 by Dr. David Rock. It defines **the field of study and exploration involved with looking at leadership development and human performance improvement through the lens of the understanding of how the brain works.***

Neuroleadership Institute

Research driven institute

*“To Transform Leadership
Through Neuroscience”*

3 Main Practices

Performance

Transform performance by
lifting the quality of
conversations

Diversity

Enhance diversity and
inclusion by breaking bias

Learning

Accelerate and embed new
behaviors through brain-
based strategies

Typical Challenges of IT?

- What common struggles do we have in the post secondary Information Technology Department
- Resource Challenges = creativity
- Non Stop Change = comfort/adaptably
- Never been done before = insight
- Very complex systems = focus/problem solving

Frontal Lobe-

reasoning,
planning, parts
of speech,
movement,
emotions, and
problem
solving, creative
thinking

Parietal Lobe- associated with movement,

orientation, recognition, perception of

The Limbic system

- includes evolutionarily
- primitive parts of the forebrain.
- It was recognized by early anatomists as the “emotional”

Evolution of our brains.....

Social pain

-.81

Social
distress

-.68

Physical pain

-.58

Pain
symptoms

-.71

My Daily Tongue Lashing

- Less likely to be able to solve complex problems
- More likely to make mistakes
- Reduced cognitive performance

“Threat literally makes people less smart “ -
David Rock

How did our current style of management evolve?

SCARF - A model for collaborating with and influencing others

- Maximize reward is also known as engagement
- Engaged employees far more productive than dis-engaged
- I believe our job as leaders is to find out how to move employees into that max reward state

Status

- Sense of worth
- Where we fit into the hierarchy both socially and organizationally
- What were those people in the coffee room thinking?

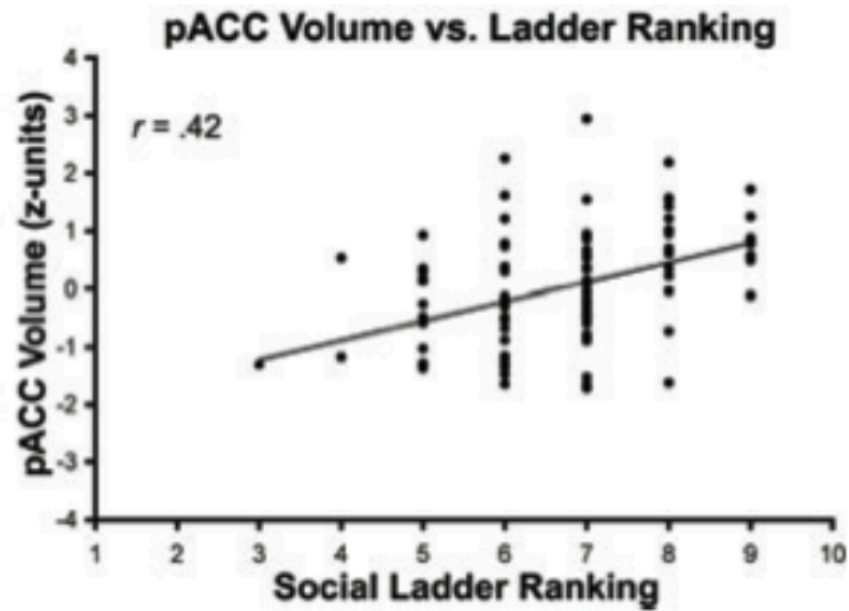

Where do you stand?

McEwen et al., 2010, *Ann NY Acad Sci*

Marmot et al, 1987

Lower status = chronic stressor => reduced volume

McEwen et al., 2010, *Ann NY Acad Sci*

Many new managers operate in a threatening way creating a danger response putting status at risk. Or maybe they know the job well and give lots of feedback also putting status at risk.

Certainty

- Being able to predict the future.
- When surroundings are uncertain, then the person's brain activity increases and creates a stress response.
- Why do we strategically plan?

Many new managers don't understand the importance of clear expectations creating uncertainty.

Autonomy

- Autonomy provides a sense of control over events
- Feeling safe/trust
- Less autonomy, more situation is treated as a threat
- Example: micro-managing

Many new managers micromanage, threatening autonomy.

Digestion

“Name ways in which we can help people be in a
“towards” state for certainty or autonomy.”

2 minutes to discuss

Relatedness

- Sense a safety with others
- We are social animals, and we naturally form social groups and build relationships
- These groups build mutual trust against the unknown.
- It helps build the team.

Many new managers don't connect with people on a human level. Concerned about feeling to close.

Fairness

- Is the perception of being treated justly
- When a person perceives they are being treated unfairly, threat response
- Reducing Threat - Try introducing greater transparency

The Ultimatum Game

Typically, responders reject unfair offers ($< 20\%$ of the total stake).

Unfair offers activate “disgust” region

UNFAIR: \$2 out of \$10
vs.
FAIR: \$5 out of \$10

(Sanfey et al., 2003; also Tabibnia et al., 2008)

Fair offers activate “reward” region
even when there’s no additional \$ gained!

FAIR: \$5 out of \$10
vs.
UNFAIR: \$5 out of \$20

(Tabibnia et al., 2008)

Many new managers don't understand the importance of fairness.

Scarf Take Aways

- Be aware of how the minds work and have evolved and use this with interactions with other people
- Mind is like teflon frying pan. Good stuff isn't remembered. Bad stuff sticks with you. We are negativity biased

What if your manager....

- Showed you what is great about you = **Status**
- Set clear expectations = **Certainty**
- Let you make decisions = **Autonomy**
- Trust and Human Bond = **Relatedness**
- Treated you fairly = **Fairness**

SMARTER + MORE EFFECTIVE + MORE
PRODUCTIVE + MORE ENGAGED

Digestion

“Stop giving your staff feedback”

2 minutes to discuss

Complex Problem Solving with Insight

A sudden solution to a long-vexing problem, sudden recognition of a new idea, or a sudden understanding of a complicated situation

Problem Solving (Linear vs Non Linear)

- Linear (Analytical) Problem Solving (networks already built)
 - Systematic
 - Incremental
 - Focused attention
 - Deadlines and reasonable threat or pressure can be effective
- **Non-linear (Complex) Problem Solving (new networks)**
 - **More intuitive, insight – Sudden**
 - **Less focused attention, diffuse cognitive processing**
 - **Deadlines and reasonable threat will hurt the ability for creative new solutions**

POLL: Where do you have your best ideas?

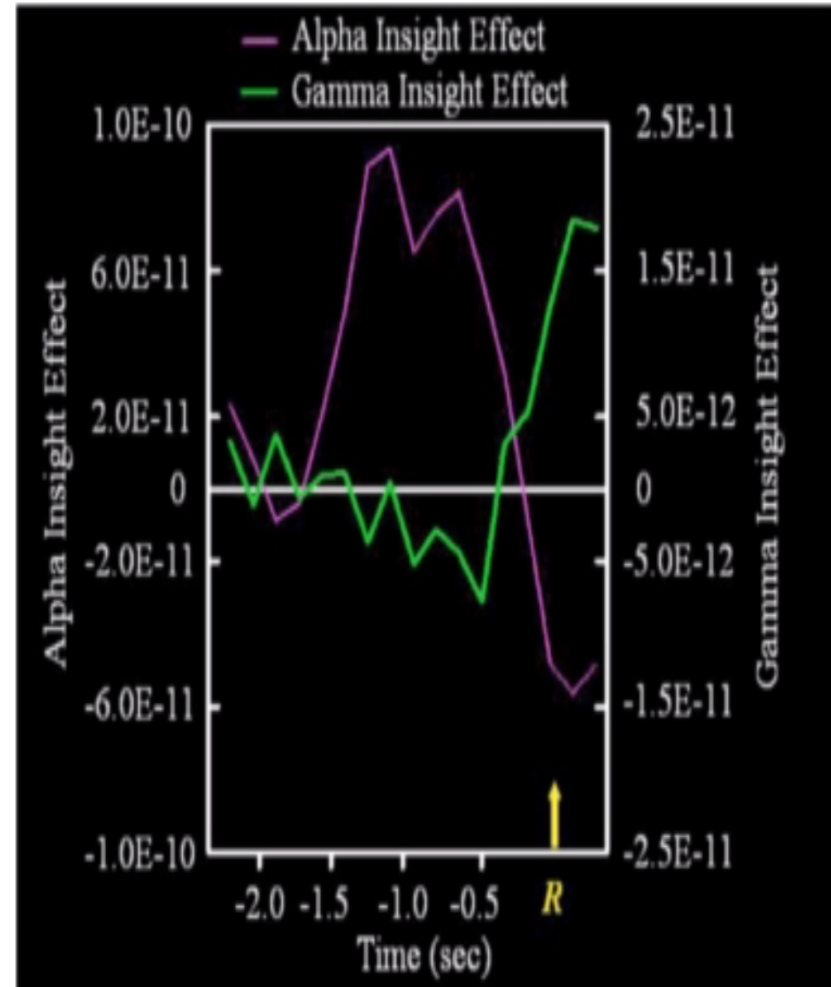

- shower
- desk
- coffee shop
- while exercising
- just before falling asleep or waking up
- going for a walk
- other

AHA!

Sudden burst of activity in the
right anterior, superior, temporal gyrus

Insight Take Away

- NOT RANDOM OR FLUKE, Insight is a PROCESS
- Different conditions for different type of complex decisions.
 - Quiet
 - Inward looking
 - Slightly happy
 - Not working directly on the problem

Robert Kegan, Ph.D. Harvard Business School
