Disruptive Innovation: From Blockchain to DNA as Disk Drives

Mark Wolff, CTO | BCNET Conference 2017

Why are we talking about this?

Research

Collaboration

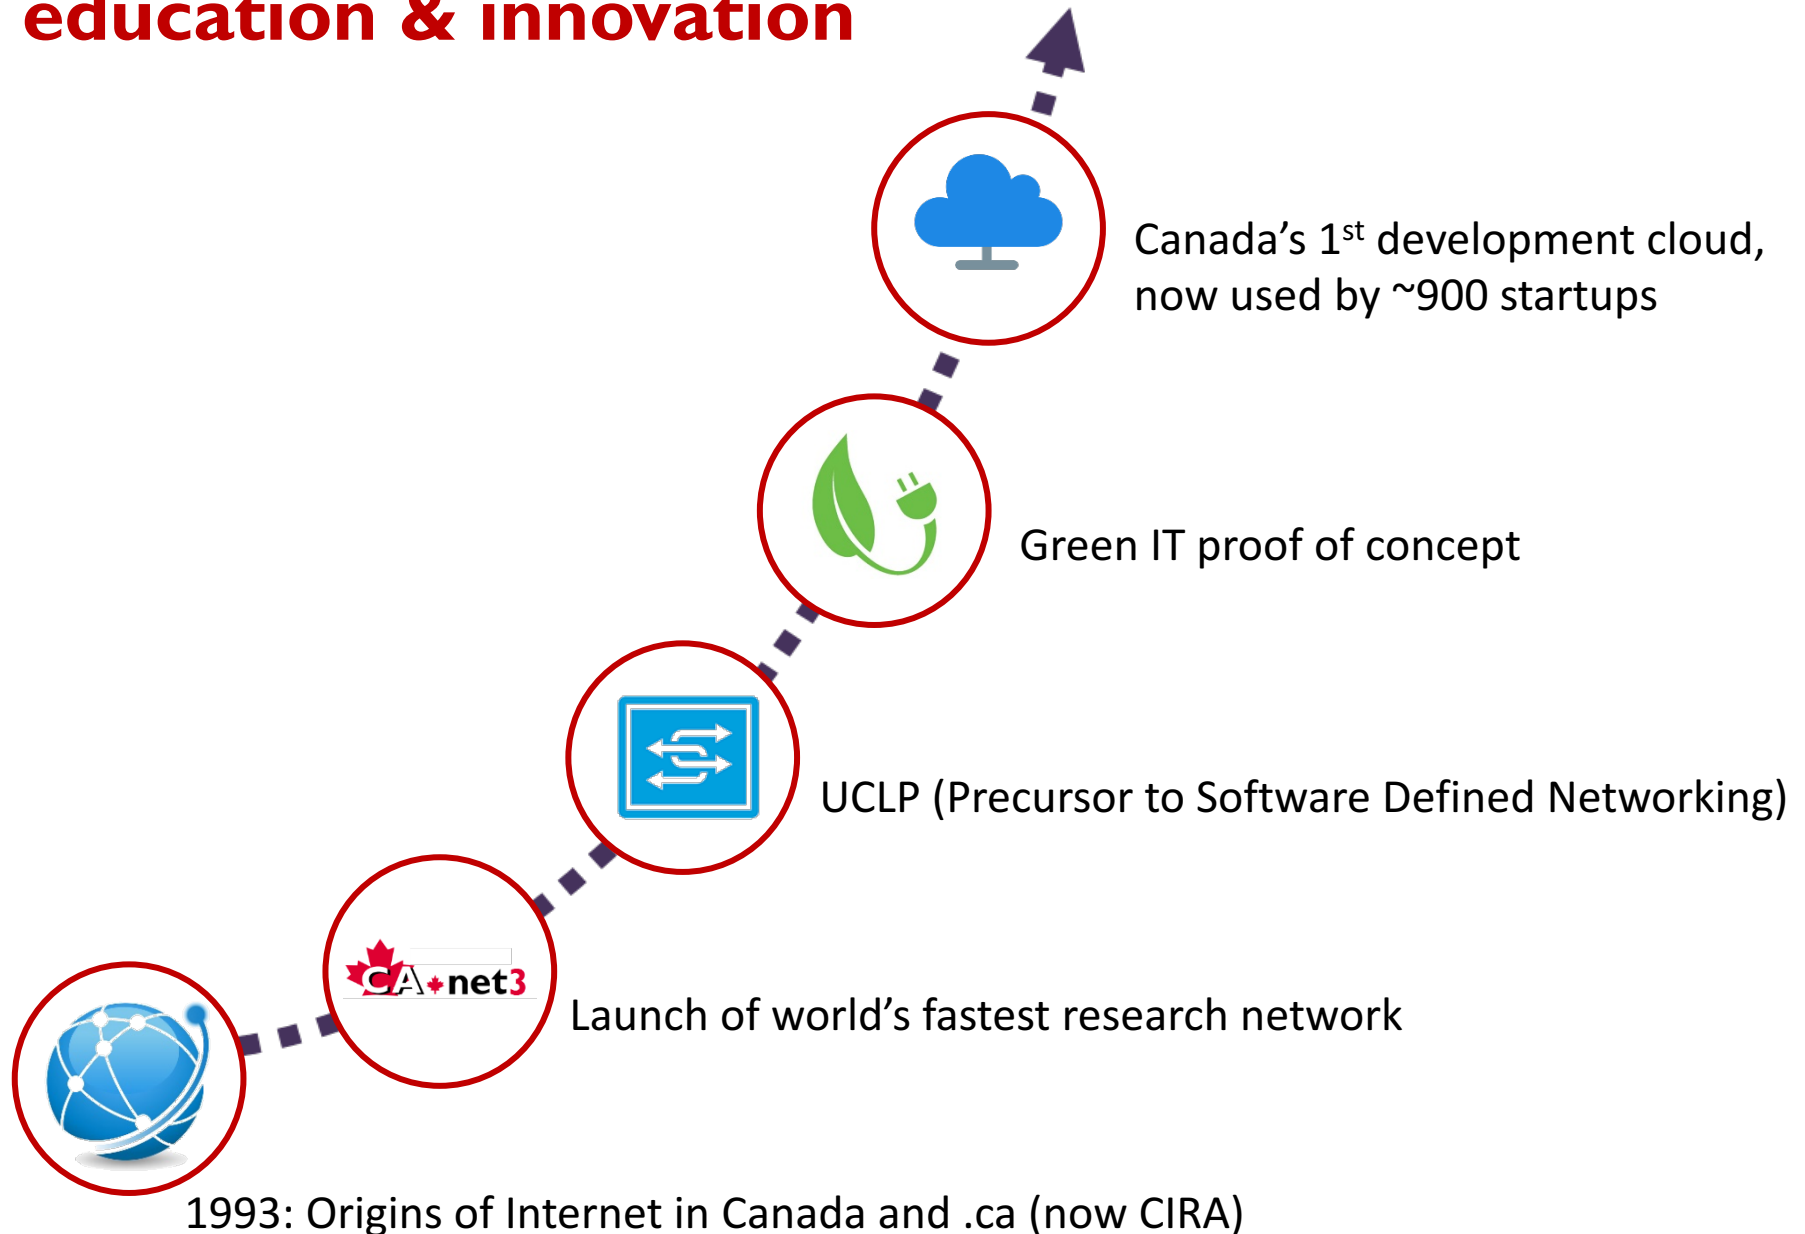

Innovation

Anytime.

A history of new tech to benefit research, education & innovation

So what comes next?

MATHEMATICAL PROOF OF THE EXISTENCE OF DONUTS

$$D = \frac{1}{c} \frac{1}{l} \frac{dl}{dt} = \frac{1}{c} \frac{1}{P} \frac{dP}{dt}$$

$$D^2 = \frac{1}{P^2} \frac{P_0 - P}{P} \sim \frac{1}{P^2} \quad (1a)$$

$$= \frac{\kappa \varrho}{3} \frac{P_0 - P}{P_0} \sim \frac{1}{3} \kappa \varrho \quad (2a)$$

$$D^2 \sim 10^{-53}$$

$$\varrho \sim 10^{-26}$$

$$P \sim 10^8 \text{ G}$$

$$t \sim 10^{10} (10^{11}) \text{ y} \quad \therefore D =$$

Blockchain

Input

Hash Sum

Blockchain

1. Blockchain is a digital (distributed) database of records called blocks.
2. Each block has the data recorded, a timestamp, and a link to the previous block.
3. Each block has a hash sum. The link to the previous block includes its hash sum, so each block is linked numerically.

Blockchain

1. Secure

- Not possible to alter a record without changing a hash sum.

2. Can be distributed

- Multiple parties can keep their own record, creates trust

3. Public or private

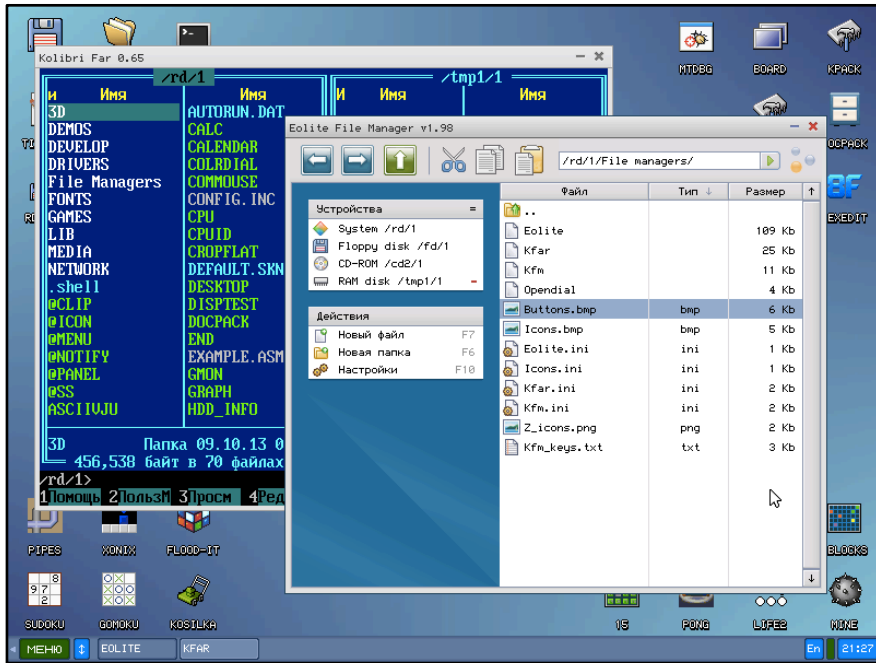

- Flexible for open, trusted, and closed environments

4. A basis for trusted information

Simple Blockchain Applications

1. Access logging
2. Machine to machine transactions
3. Record of equipment changes, calibrations, repairs, warranty
4. Software licensing certificates
5. Student, faculty, researcher records

DNA as Storage

DNA Storage

- > Mikhail Neiman credited with idea of DNA storage, 1964-65
- 1. DNA storage works today, uses artificial DNA
- 2. Higher density than hard drive storage
- 3. 200+ PB per gram of DNA
- 4. Can re-use today's error correction methods
- 5. Cost will decrease with DNA technology advances

Previous slide per Columbia University & the New York Genome Center, 2017

DNA Storage Limitations

1. Slow access rate. DNA must be sequenced first to read
2. Currently expensive. Thousands \$ to synthesize, read
3. Currently needs special storage environment

Conclusion:

5 - 10 years away from first application of (very) long-term storage use.

Now what?
