TRICK QUESTION

IT'S A TRAP

It's all about design & configuration...

Realistic Conclusions...

What are 'Just the facts' exactly?

Consider costs carefully

Solve the needs you actually have

Responsibility remains constant

Staffing remains constant

Security is difficult and YMMV

In general...

Cloud is better for burst-y workloads

Cloud is better for operational funding

AI

The attempt to simulate
intelligent or human-like
behavior in machines...

what could possibly go wrong...

AI

You keep using that word

**I do not think it means what you
think it means.**

Still Testing

**“Think of how stupid the average person is,
and realize,
that means half of them are stupider than that.”**

— George Carlin

So really... Machine learning

Teaching machines to learn, through extensive hand-holding by collections of humans. Which, because of human nature, results in machines that are about as stupid as the average of those same humans.

(See previous slide)

0 50 100 150 200 250

cat

Facial recognition algorithms that fared well with 10,000 distracting images all experienced a drop in accuracy when confronted with 1 million images.

(just read ML)

AI Can Be A Tough Sell In The Enterprise, Despite Potential: Panel

Artificial intelligence tools are expected to boost productivity but early failures can create barriers in the workplace, AI experts say

(ML again)

Take Monsanto Co., which expects a vast majority of its early AI and deep-learning projects to fail, says Anju Gupta, the agricultural giant's director of digital partnerships and outreach.

A 99% failure rate is acceptable because "that 1% is going to bring exponential gain," Ms. Gupta told a crowd of enterprise IT managers gathered here at an AI industry conference.

(sigh)

Amazon reportedly has thousands of people listening to snippets of Alexa conversations

PUBLISHED WED, APR 10 2019 • 7:27 PM EDT | UPDATED THU, APR 11 2019 • 3:07 PM EDT

“...a German Amazon-user requested the company for all data pertaining to him—which is their right per the ["Right of Access" clause](#) in the General Data Protection Regulation (GDPR) law...”

“But Amazon accidentally sent this person 1,700 voice recordings from a stranger, including recordings that happened in the shower.”

~

https://motherboard.vice.com/en_us/article/pa54g8/amazon-sent-1700-alexa-recordings-to-the-wrong-person

“Computers can, in theory, emulate human intelligence, and exceed it. Success in creating effective AI, could be the biggest event in the history of our civilization. Or the worst. We just don't know. So we cannot know if we will be infinitely helped by AI, or ignored by it and side-lined, or conceivably destroyed by it.”

“While AI has the potential to transform society <...> it also comes with huge risks.”

- Stephen Hawking

Realistic Conclusions...

AI is interesting but academic
ML is still a work in progress

Avoid overreliance – still “bleeding edge”

Excitement for new technology,
should never cloud common sense

Keep up the research & Involve Social Science

IOT

Proprietary devices running, unpatchable firmware with a full network stack that frequently bridge networks and radio data links while communicating with unknown locations such that cybersecurity vulnerabilities are translated into actual physical danger to life and limb.

IOT can be pointless

... or Disturbing

... or Truly Horrifying

FDA Recalls Nearly Half a Million Pacemakers Over Hacking Fears

📅 September 01, 2017 👤 Swati Khandelwal

Almost half a million people in the United States are highly recommended to get their pacemakers updated, as they are vulnerable to hacking.

Realistic Conclusions...

Just because you can...

We (probably) can't stop the insanity

But we can make some dents

Change those defaults

Segmentation

Monitoring

Lobby for change

Taking everything we love about computer games and reducing the resolution, frame rate, variety, control options, and potential audience; while increasing the cost, eliminating flexibility, and making people nauseous.

VR/AR

VR pundits: ***This is the future of gaming***

Virtual Reality Bombshell: Philip Rosedale Says Social VR Not Sustainable With Slow HMD Sales, Drastically Scales Back High Fidelity Hosted Content, Moves Focus To PC/Mac Clients

Oculus Go made an estimated 289,000 shipments in Q2 2018, which helped major headset sales grow by almost 40% compared to the first quarter. But, excluding the Oculus Go, major headset sales were **down 50%** in the first half of 2018 compared to the same time last year, SuperData said.

Realistic Conclusions...

VR/AR is not (ready) for gaming
But may eventually do 'some' gaming

VR is great for certain training

AR has great potential for maintenance

Blockchain

The application of basic cryptographic techniques to ensure integrity and non-repudiation of transactions over time, in such a way that draws about as much energy as the entire country of Argentina yet fails to solve the most pressing business problems.

So, what is this whole
blockchain thing anyway

Hash Function

“Magical” math (one-way)

Variable length data input

Constant length numeric output

01ef49d3133198603fa02fe61fd4d23412b7850210e983ca004b814685fd1a8c

nonce

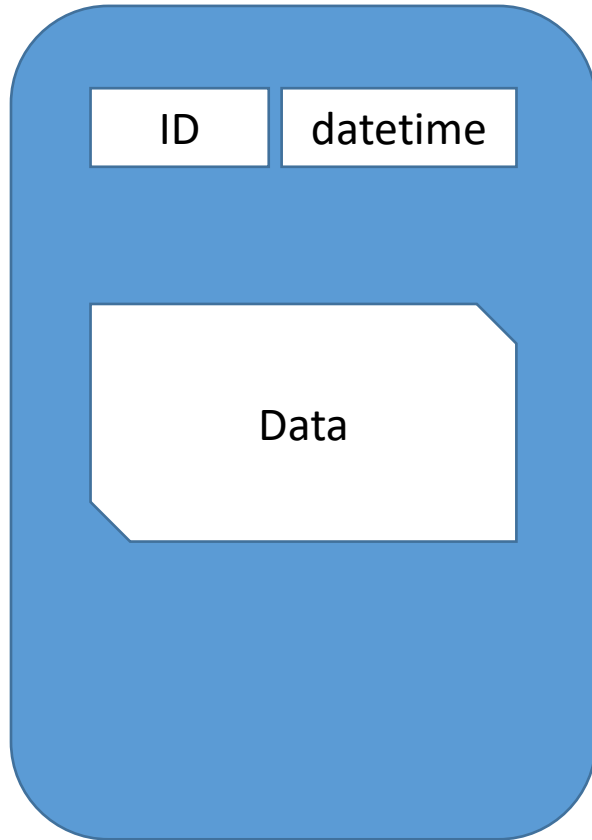

n(once)

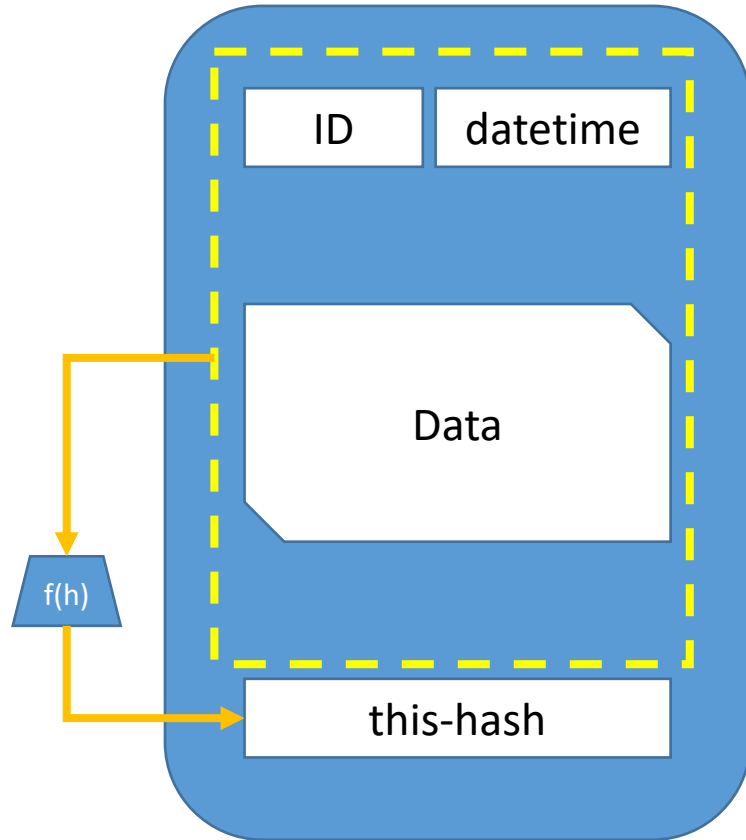

Single use number
Frequently pseudorandom
Somewhat special in this case

So you have some data...

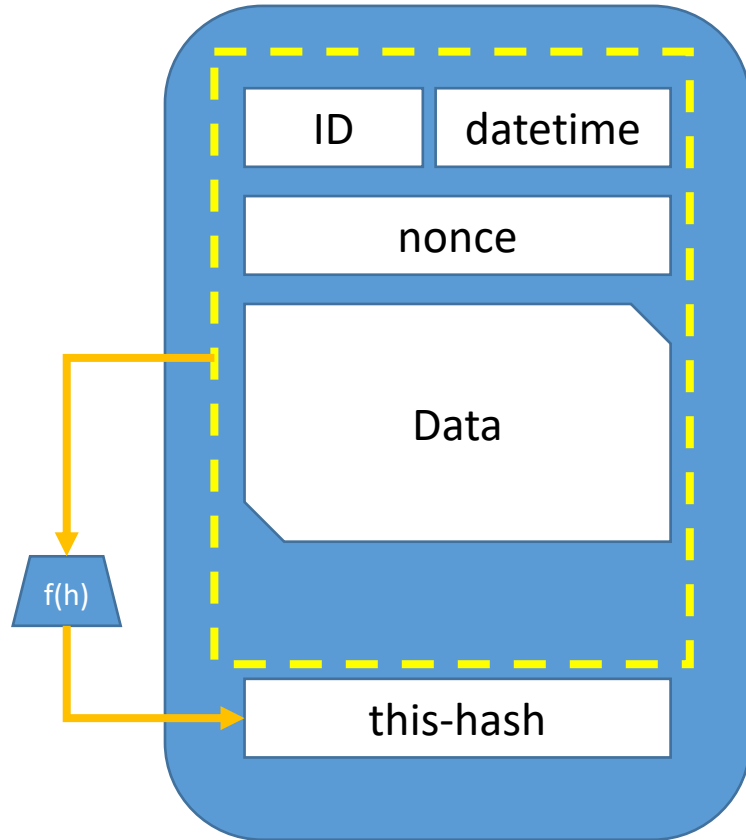

Drop it in a bucket,
ID and timestamp it

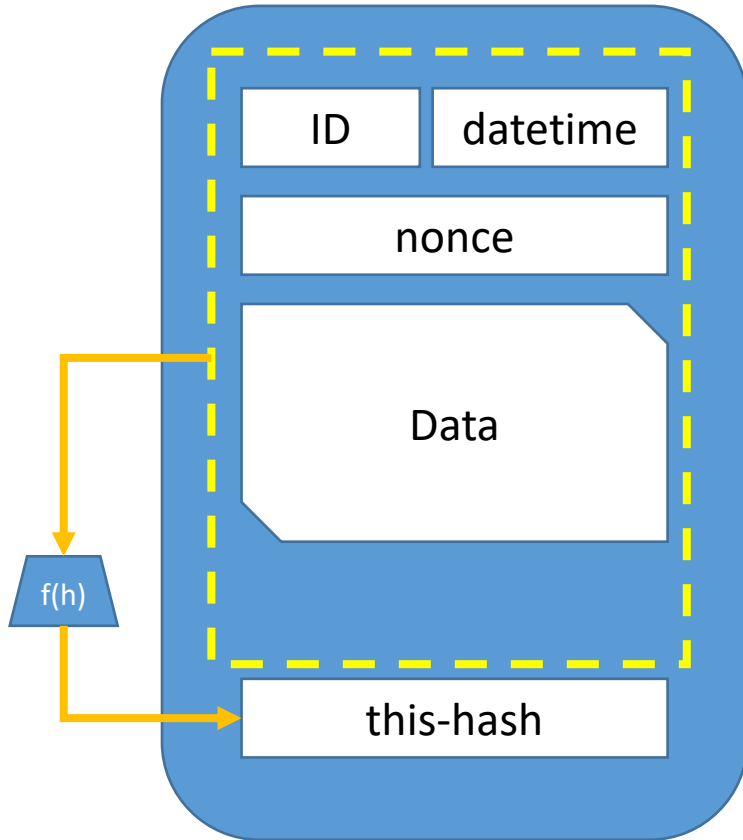

Grab a hash of that record

cc9cf48202a4e6ed2f4a774c2519da40e5cb79340d709f9ea902a7d5454a209a

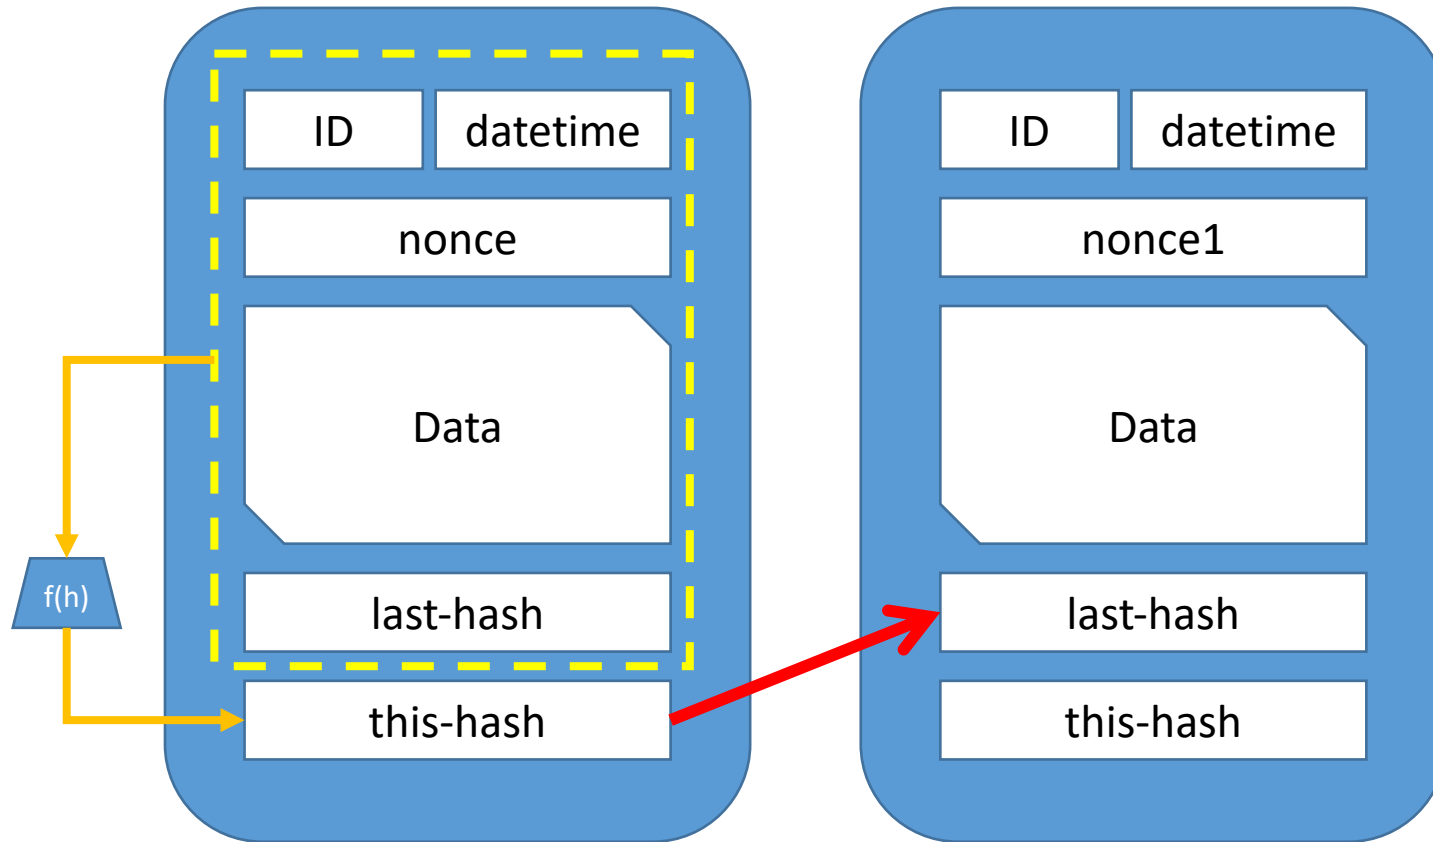

Find a nonce that
makes the hash “special”

Find a nonce that
meets “target” criteria

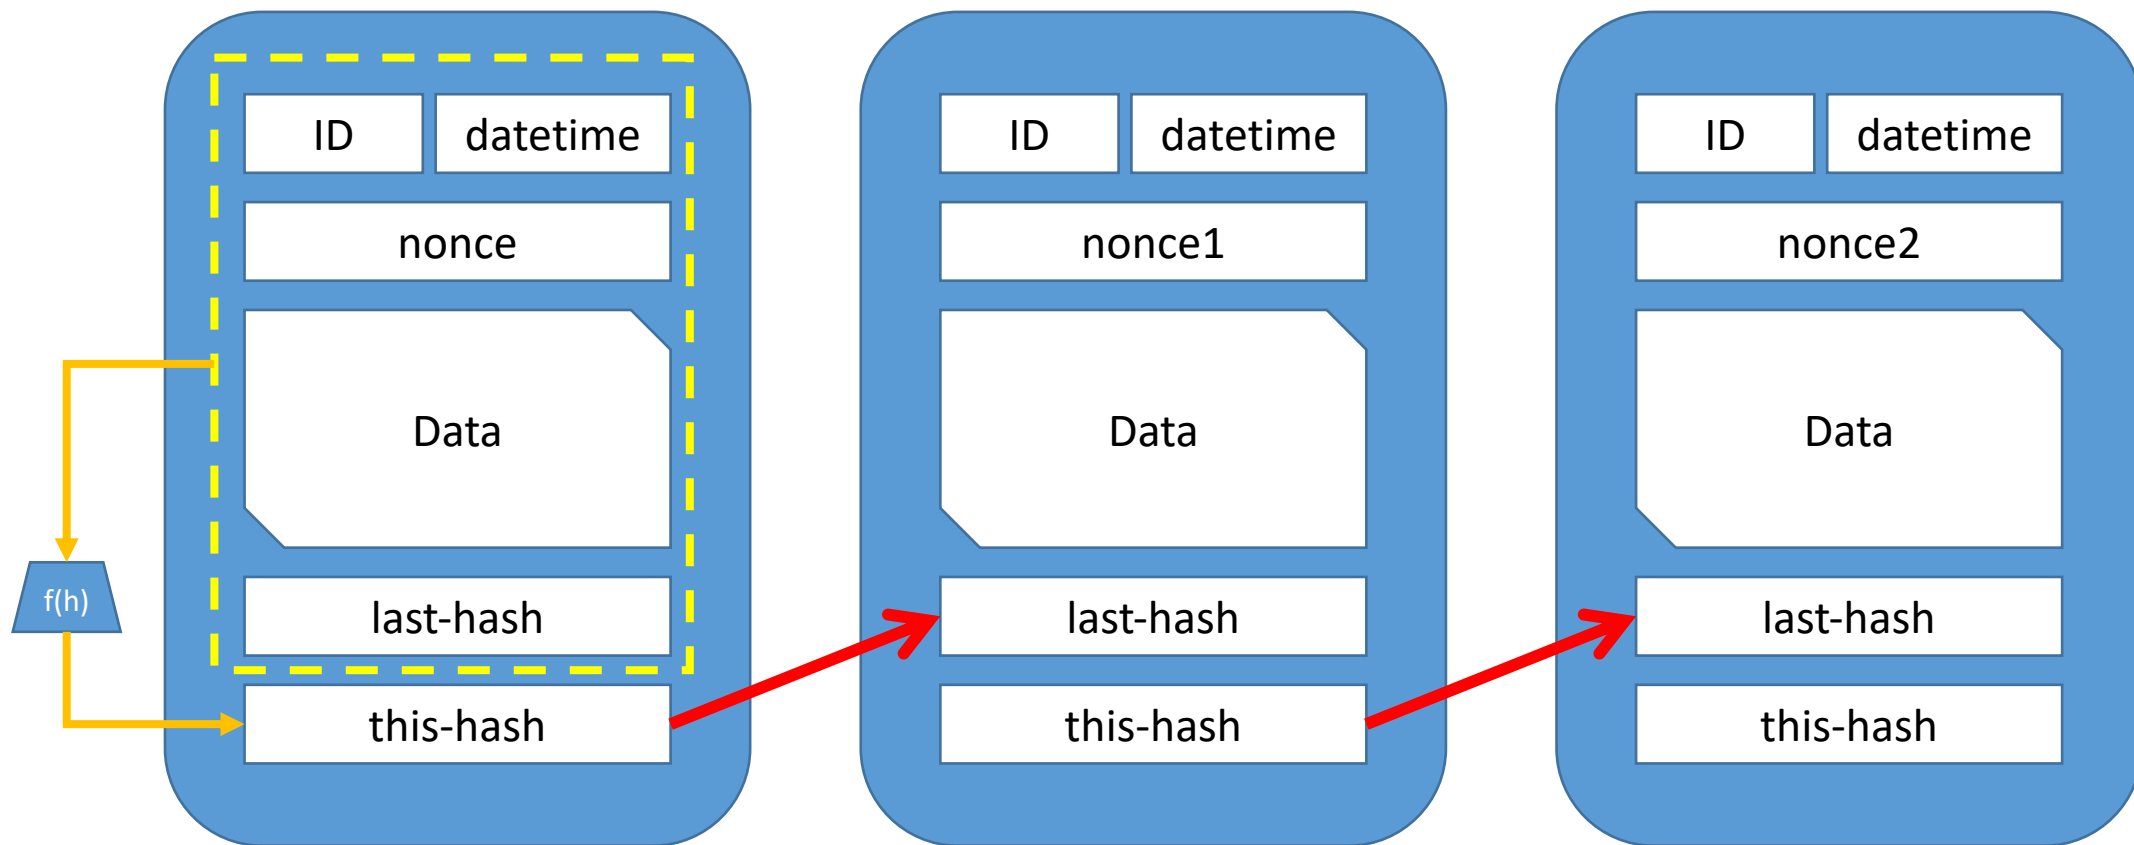

0000a53477b834b1dcdec3e23d7d8a3f8ff0e24e48262b0bb7513b22fde951bd
“Proof of work”

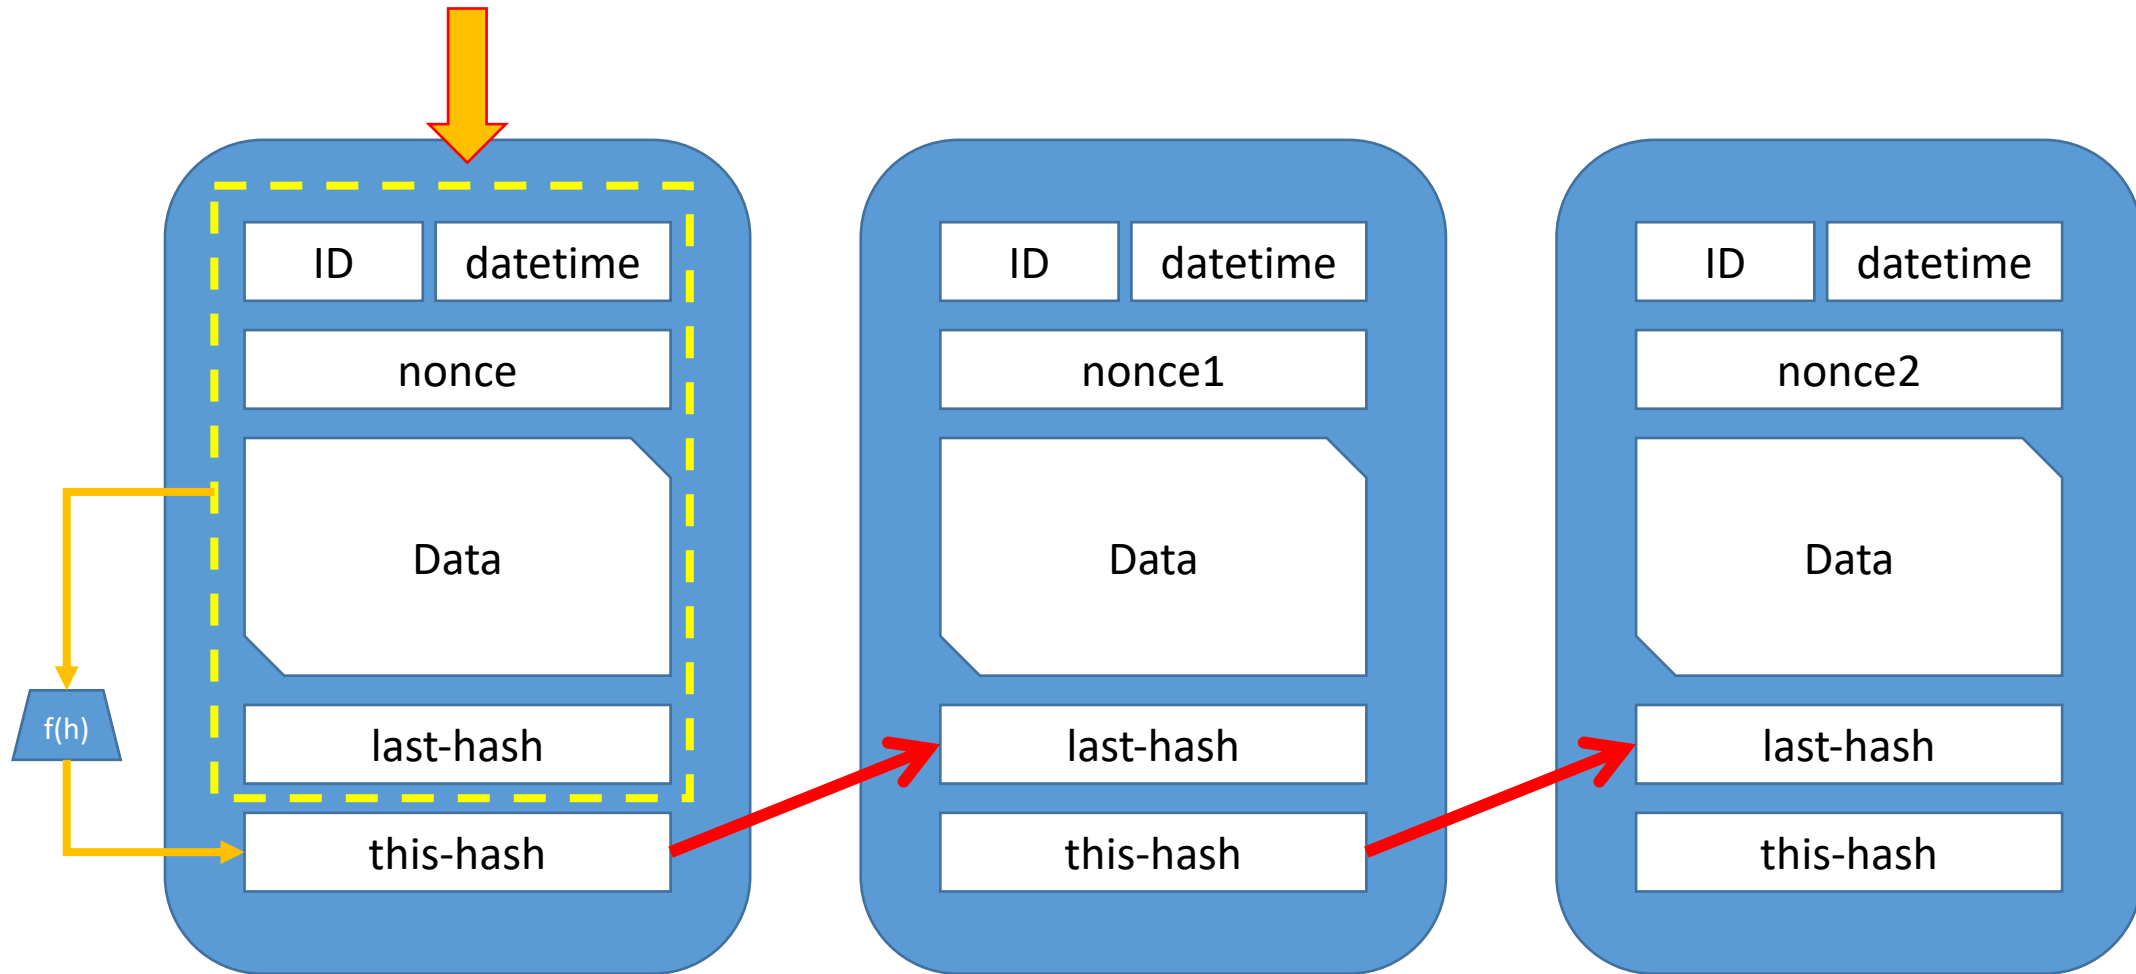

Now, string them
together:
Include the
previous hash in
the next block

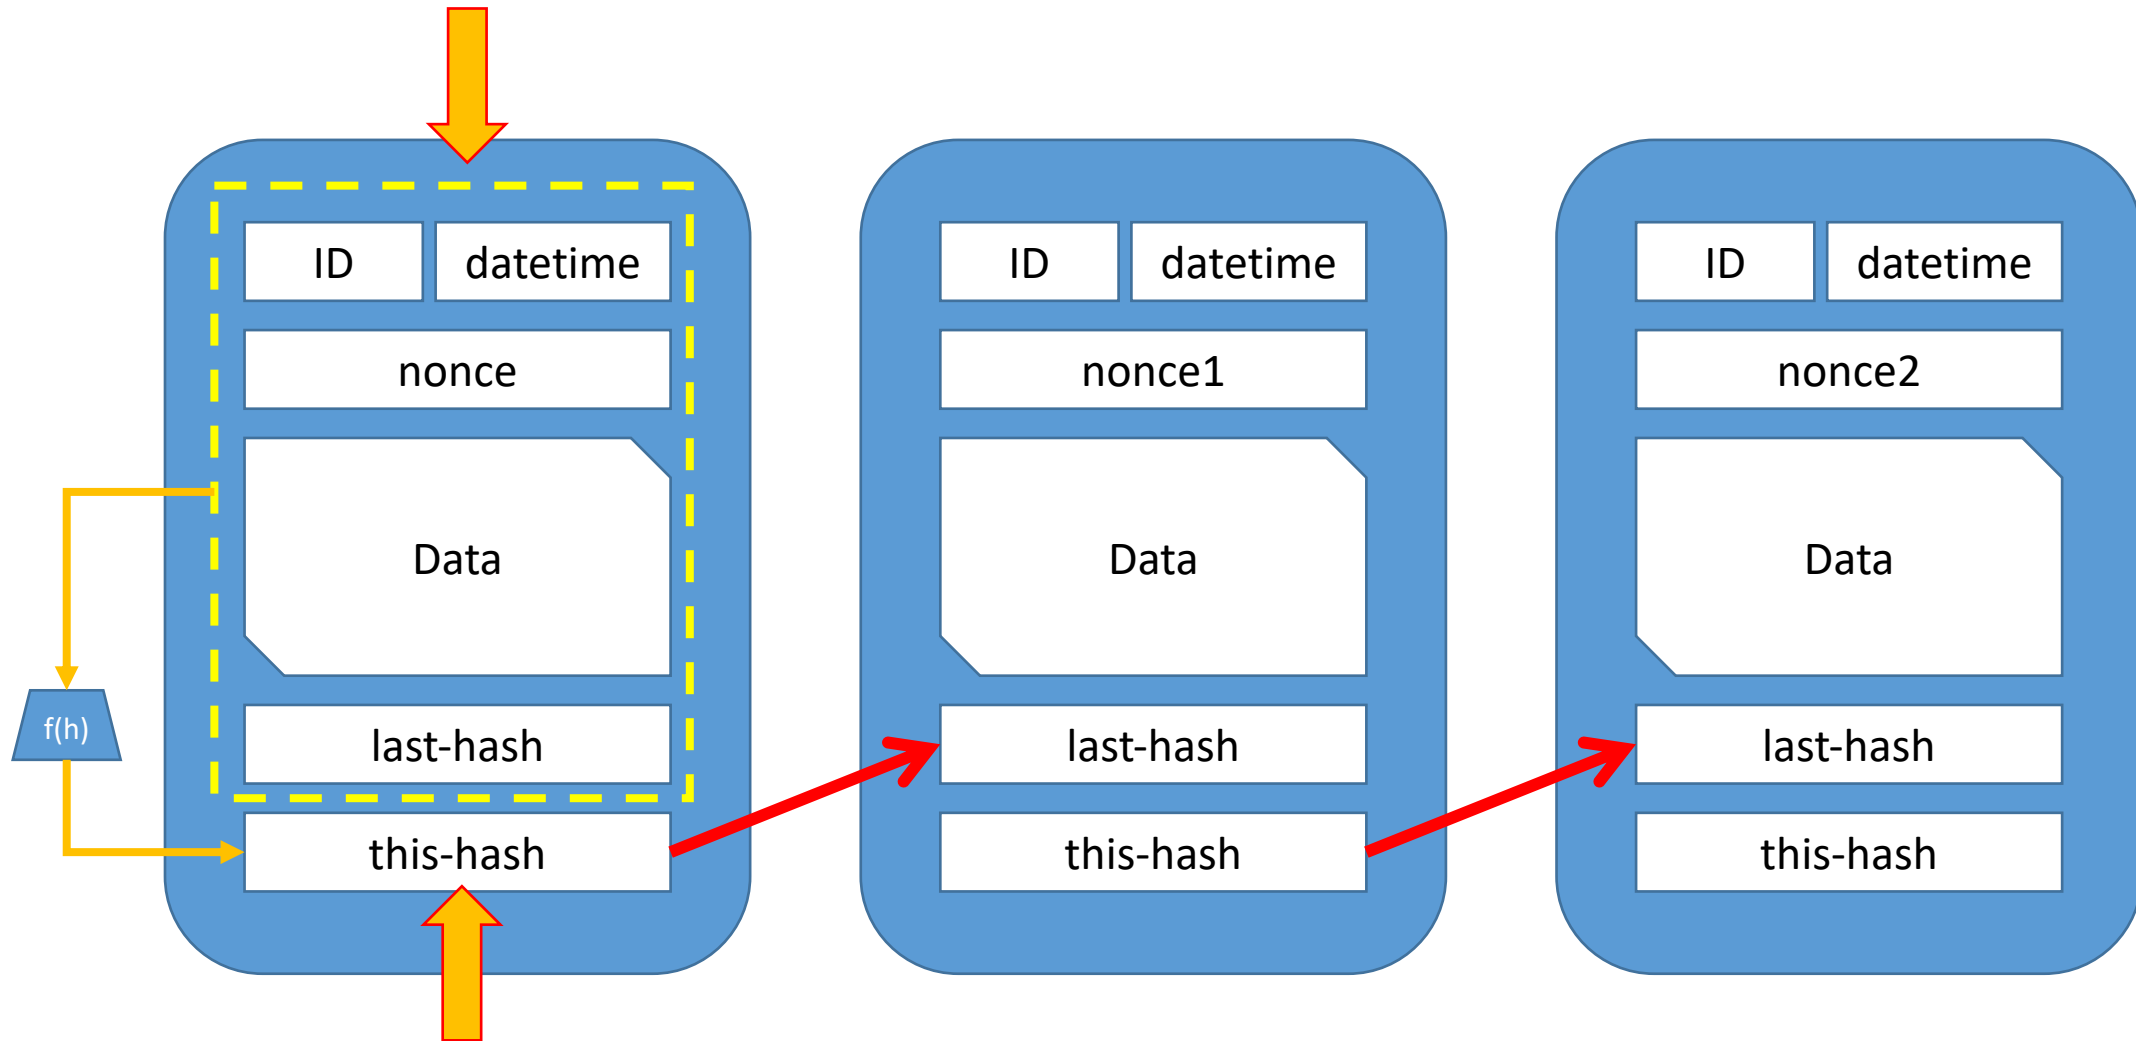

Hash, Link, Repeat!

If I change ANYTHING here

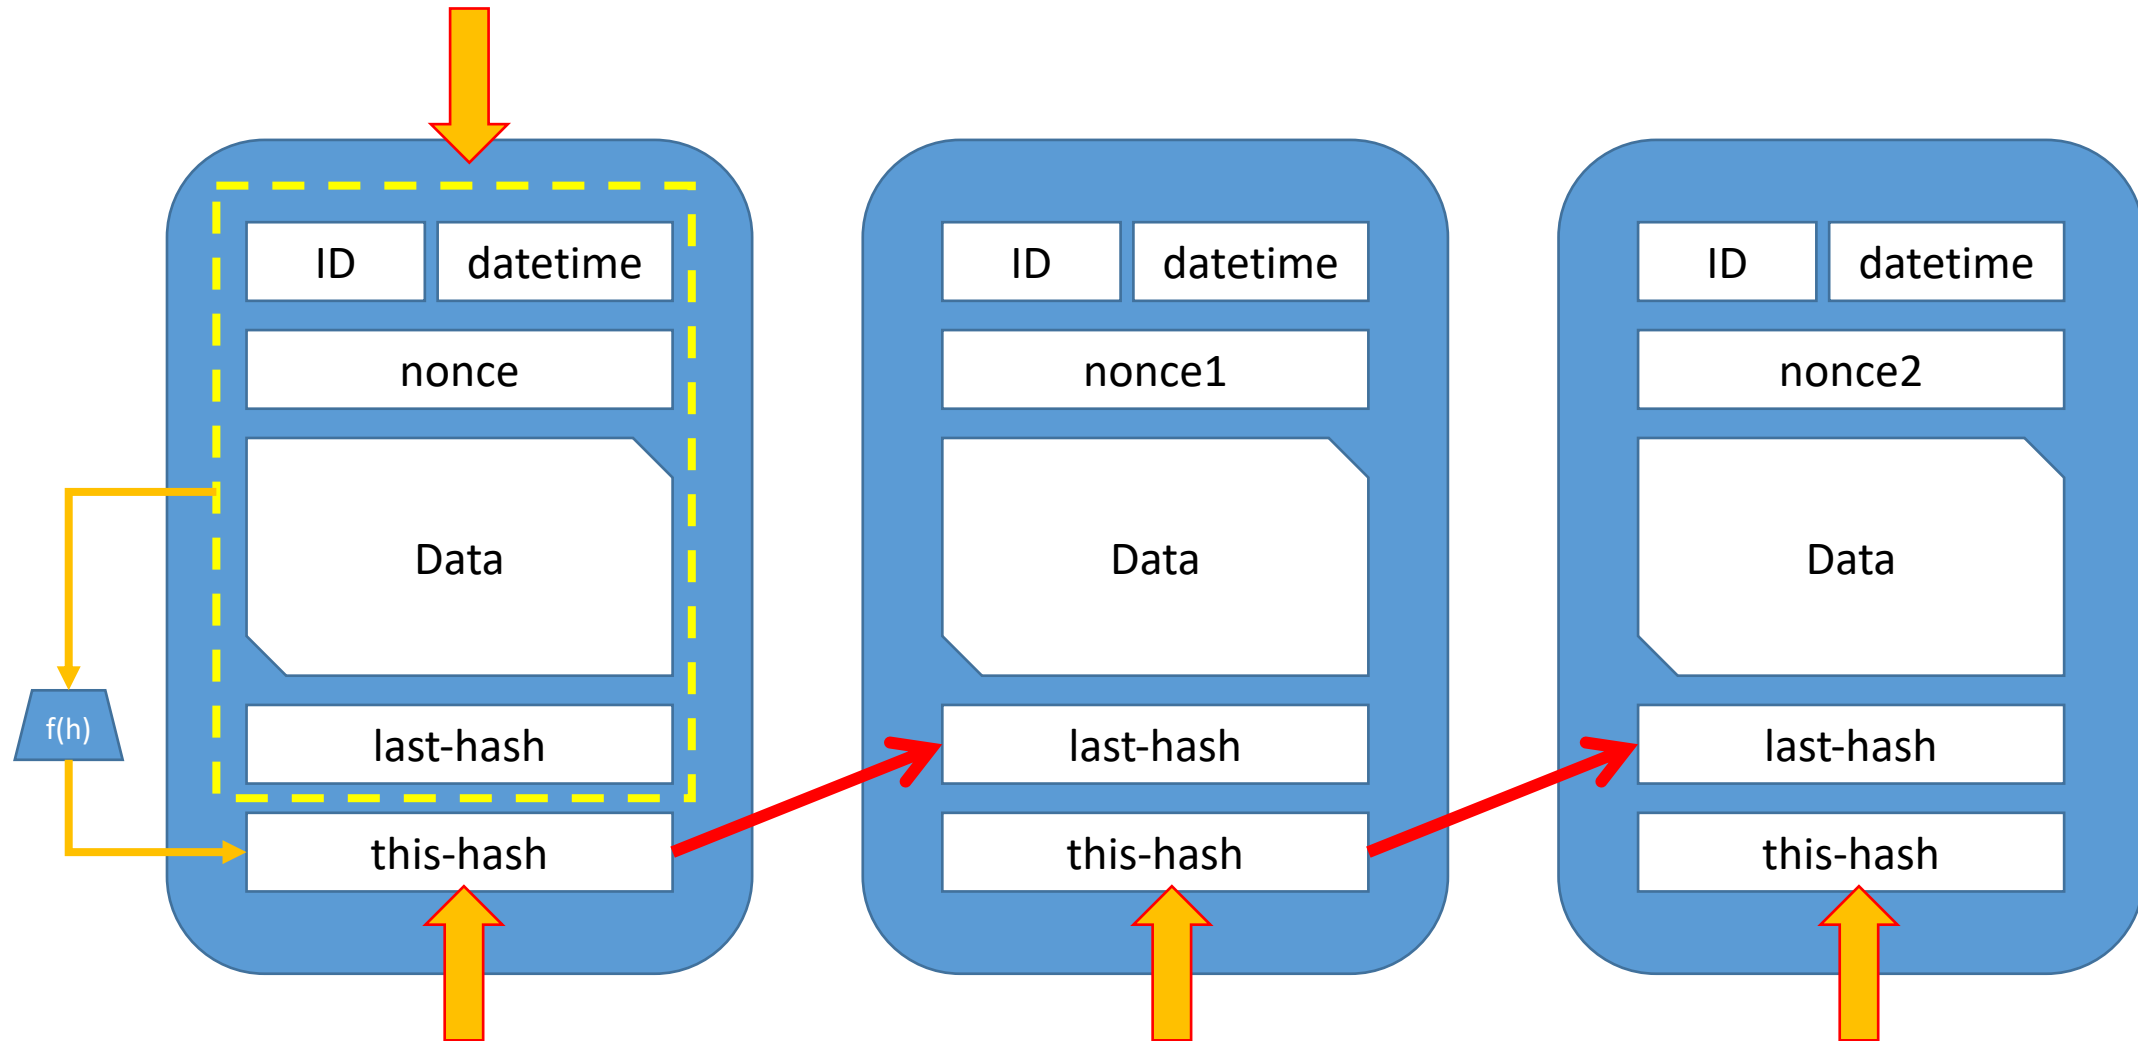

If I change ANYTHING here

It changes the hash here
(and invalidates it)

If I change ANYTHING here

It changes the hash here
(and invalidates it)

And here

And here

Why “Distributed” ?

Chain A

000024e48262b0bb7513b22fde951b

Chain B

0000a53477b834b1dcdec3e23d7d8a

Chain C

000024e48262b0bb7513b22fde951b

● period

The classic
data
analogy

A realistic
data
analogy

\$25

\$2500

When all you have is a hammer....

"The most difficult part is ... getting people to understand that they will need to change the way they work."

—Marcelo Creimer,
Ezly Tecnologia, São
Paulo, Brazil

"Finding the right business case for blockchain is the top challenge for every enterprise in this space."

—Rahul Golash,
Ledgerium, Southbank,
Australia

A hash within a hash?

Emergent Tech

Blockchain study finds 0.00% success rate and vendors don't call back when asked for evidence

Where is your distributed ledger technology now?

By [Andrew Orlowski](#) 30 Nov 2018 at 11:56

SHARE ▼

"We found a proliferation of press releases, white papers, and persuasively written articles," [Burg et al wrote](#) on Thursday. "However, we found no documentation or evidence of the results blockchain was purported to have achieved in these claims."

Myths

Top 5 ~~Reasons~~ For Blockchain Implementation In Healthcare In 2019

How can the healthcare industry benefit from blockchain technology? Here's why blockchain implementation in healthcare should be a priority in 2019

Single and longitudinal records of the patient

Single patient records including disease records, laboratory results, and treatments could be accomplished using Blockchain. This further works by helping providers to use comparatively better techniques to take care of the patients.

Myths

Top 5 ~~Reasons~~ For Blockchain Implementation In Healthcare In 2019

How can the healthcare industry benefit from blockchain technology? Here's why blockchain implementation in healthcare should be a priority in 2019

Master patient indices

Often times, when you tackle a plethora of patients database, the records get lost or mixed up. Plus, depending on the EHR you are hiring, there can be a considerable amount of difference in the way of recording database which then complicates even the simplest form of data.

Myths

Top 5 ~~Reasons~~ For Blockchain Implementation In Healthcare In 2019

How can the healthcare industry benefit from blockchain technology? Here's why blockchain implementation in healthcare should be a priority in 2019

Interoperability

Blockchain technology utilizes advanced APIs to turn data storage as well as EHR interoperability into a consistent procedure. As Blockchain network is only distributed across the authorized people and that too in a secure form, it eradicates the additional expenditure linked to data reconciliation.

don't just take my word for it...

J Med Internet Res. 2019 Feb 8;21(2):e12533. doi: 10.2196/12533.

Is Blockchain Technology Suitable for Managing Personal Health Records? Mixed-Methods Study to Test Feasibility.

Park YR^{#1}, Lee E^{#1}, Na W², Park S¹, Lee Y³, Lee JH^{3,4}.

CONCLUSIONS:

This study confirms that it is possible to exchange PHR data in a private blockchain network. However, to develop a blockchain-based PHR platform that can be used in practice, many improvements are required, including reductions in data size, improved personal information protection, and reduced operating costs.

<https://www.ncbi.nlm.nih.gov/pubmed/30735142>

Realistic Conclusions...

Dammit Jim I'm a ledger not a silver bullet

It does not solve intrinsic data problems

It does not solve policy/compatibility problems

It does not add privacy

It is slow, expensive, and transactional

It has fantastic potential to address the "I" in CIA

Technology is only one part of any solution.

There is no boat to miss, unless you are already planning a trip to that destination.

Leading (or Bleeding) edge is expensive.

Question everything.
